

T-60 Guitar T-40 Bass

T-60 T-40

The new Peavey T-60 Guitar and T-40 Bass represent years of research and design by a combined staff of skilled craftsmen, engineers and musicians dedicated to the creation of extraordinarily high quality

instruments for the serious performer. We have accomplished many construction and design innovations and have improved on many of the features of competing units that have enjoyed

acceptance on the concert stage and in recording studios. This approach has led to a series of versatile and dependable instruments that are among the very best available, regardless of price.

Pickups

One of the most important parts of an electric guitar is, of course, the pickups. We're extremely proud of our pickups because of their versatility and clarity. Through extensive research and development, we have reached an optimum combination and balance of desirable features that include high output without excessive loss of frequency response or sustain, bright treble, and full rich bass.

Circuitry

Peavey's unique control circuitry* involves a completely new concept that utilizes the full "humbucking" characteristics of the pickups when the tone controls are in the bass-oriented positions and progressively operate the pickups as single-coil units as the tone controls are turned toward the treble (clockwise) position, giving the benefit of both types of pickups. Compensated volume and tone controls are provided for each pickup along with a selector switch and a phase-changing switch.

Tuning Machines

The finest chrome-plated tuning machines have been provided for high tension without slippage or backlash. The T-60 guitar keys are fully sealed with a precision 12:1 ratio. The T-40 bass keys are open geared with large split safety posts and a precision 22:1 ratio.

Bridge

Peavey bridge units are made of precision die-cast metal with copper base plating, nickel-plating, and then chrome-plating for a durable, beautiful finish. The bridge saddles are rectangular with extra long adjustment slots and a radiused portion to self-center the strings without notch abuse. Each saddle is adjustable for intonation (length) and string height.

Neck

Peavey necks are constructed of the very best available rock maple bi-laminated* for strength and durability. The thickness from the back of the neck to the fingerboard is thin and comfortable with ample string separation for speed and fingering ease. Frets are precision placed by machine, not by hand, and are made of 18% nickel-silver, an extremely hard alloy. These frets will last much longer under harder playing conditions than conventional frets! Necks are mounted to the body with four chrome-plated screws for stability and replaceability and have the benefit of a neck tilting mechanism for critical string height adjustment.

Case

Each Peavey guitar and bass comes supplied with a high quality custom travel case. These cases feature form-fitting, bronze velour interiors with large storage compartments; premium hardware; and tough, scuff-resistant exteriors, for years of beauty and protection.

* Patent applied for.

BODY:

Select ash hardwood
Laminated for stability
Precision profiled for uniformity
Arched front
Strings installed through body
Deep double cut-away design
Precision neck/body fit
Output jack mounted through 1" hardwood

NECK:

25½-inch scale (Bass 34")
Sealed top quality tuning machines
Die cast metal topnut
Wide 18% nickel silver frets
Rock maple construction
Bi-laminated for strength and stability
Stainless steel torsion rod with rolled threads
Neck tilt adjustment
Four mounting bolts

ELECTRONICS:

Two center tapped humbucking pickups fully
potted and shielded for hum-free operation
Unique balancing tone circuitry with tone
compensated volume controls
Bar type ferrite magnet assembly for uniform
response
Fully shielded wiring and control pockets
Equalization control provides single coil and
humbucking modes
Phase switch adds versatility and tonal
variations
Separate tone and volume controls for each
pickup

GENERAL:

All screws copper and chrome plated
Pickup mounting ring screws black anodized
Laminated pick guard
Top quality strap supplied with instrument
Superior molded road case with premium
hardware supplied with instrument
